> Manish S. Shah **Primary Examiner** Art Unit: 2853

Continuation of 11. does NOT place the application in condition for allowance because: Applicant's arguments filed 04/13/2005 have been fully considered but they are not persuasive. Applicant argued that the Omata et al. reference and Nagashima et al. reference did not suggest or teach that the ink holding member comprises polypropylene, which is not persuasive. Omata et al. clearly teaches in column: 6, line: 52-61 that "Furthermore, because of small welding area described above, a material, such as polypropylene (P.P.), polybutylene-telephthanol (P.B.T.) or the like, which has high gas barrier capacity to be ideal as a material for the ink tank container but is difficult to use for poor welding ability, can be certainly welded. Particularly, since P.P. material is low in material cost and has high transparency, the tank container formed of the PP material permits the user to visually check an ink remaining amount for convenience of use." So Omata et al. teaches that the ink holding member is made of polypropylene. Nagashima et al. teaches that the ink holding member made of the polymer formed by condensation or polymerization reaction of organic compounds, and the polypropylene is also a polymer, which is form by the polymerization reaction of the organic compound. So Nagashima et al. teaches the ink holding member made of polypropylene.
